

FaChai Coin Dozer

Mechanics Guide

An online dozer is neither pure physical pushing nor pure luck — it's a system of drop logic plus a random number generator.

The coin dozer looks the most like a physical arcade cabinet, which is why it's most easily mistaken for a pure physics game. This guide makes the settlement logic of an online dozer clear — the on-screen stacking and sliding are a visual presentation, and the final drop is co-decided by drop logic plus RNG. See it, and you won't keep feeding coins over an 'almost.' It covers only mechanics, invents no RTP, and involves no real-money wagering.

01 The shared skeleton of FC dozers

The signature titles are Fa Chai Dozer, Circus Dozer and Money Tree Dozer. The rule in one line: drop coins to push the coins and prizes forward, and whatever falls off the edge is yours. The cognitive load is very low, with almost no learning curve.

Featured games Fa Chai Dozer, Circus Dozer, Money Tree Dozer

02 Drop logic: not pure physics

The stacking and sliding on screen are a visual presentation; behind them, programmatic drop logic plus a random number generator co-decide the final drop, keeping overall return inside a set band. The FC dozers we cover mostly carry a 97% figure; the display is authoritative.

03 Why an RNG backstop is needed

Pure physical pushing would let return drift with the state of the table, hard to stabilise. Drop logic plus an RNG backstop lets the long-run RTP converge to a quotable value. It also explains why the online version feels close to a physical machine but not identical.

04 The 'almost pushed off' near-miss trap

A row of coins hanging on the edge, looking like one more drop sends them over — that 'just barely' picture is the near-miss effect shared by all push formats. It gives excitement close to a real payout yet has nothing to do with the next coin. However full the table is, it doesn't change the drop probability of the next coin.

05 How to view the dozer rationally

Its strengths are that it's relaxed, intuitive and light on decisions — good as a low-cognitive-load category to unwind with. But like slots and fishing it carries a negative long-run expectation, and a 97% figure means it's still slowly leaking. Treat 'one more and it falls' as a signal to stop, not a reason to add.
